

How to connect to **ORALE databases** from clients outside ELTE domain.

1. **Open an ssh connection** to caesar.elte.hu with the following settings:

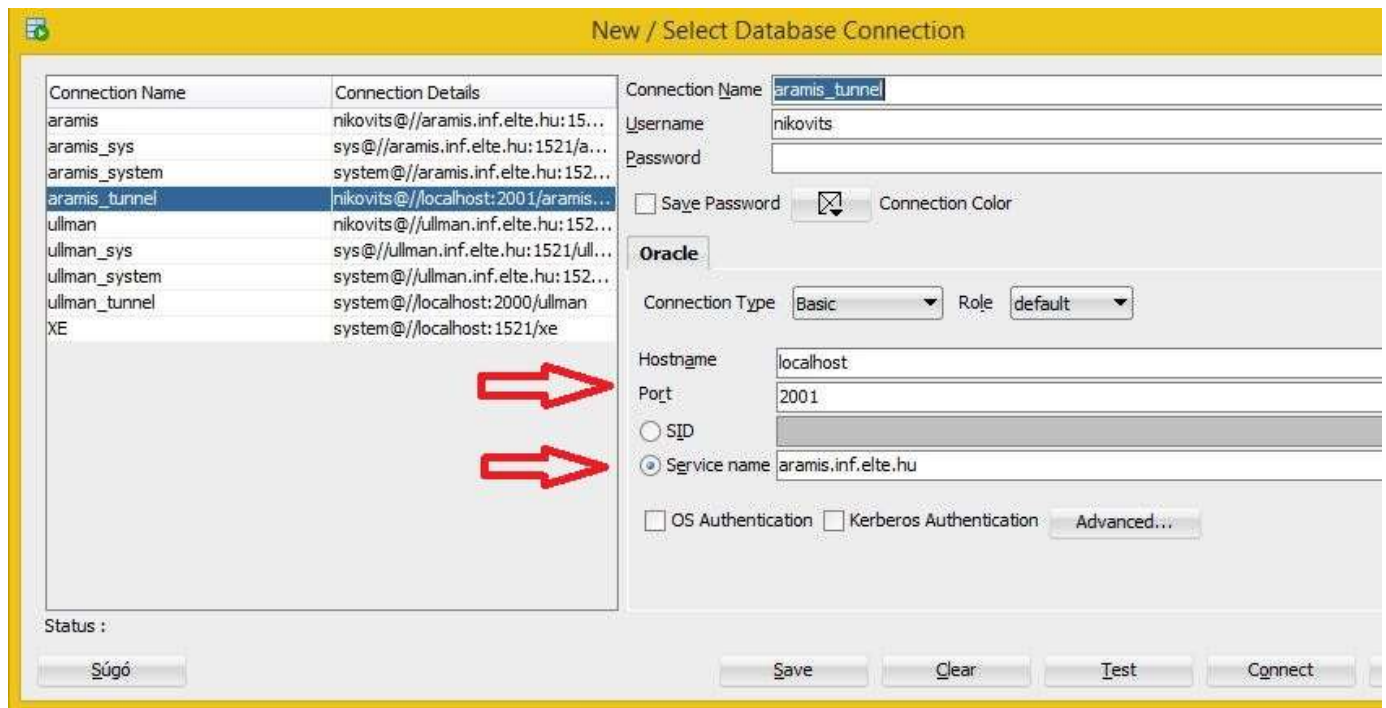

Forward your local 2001 port to aramis.inf.elte.hu and 2000 port to ullman.inf.elte.hu.
The result looks like this:

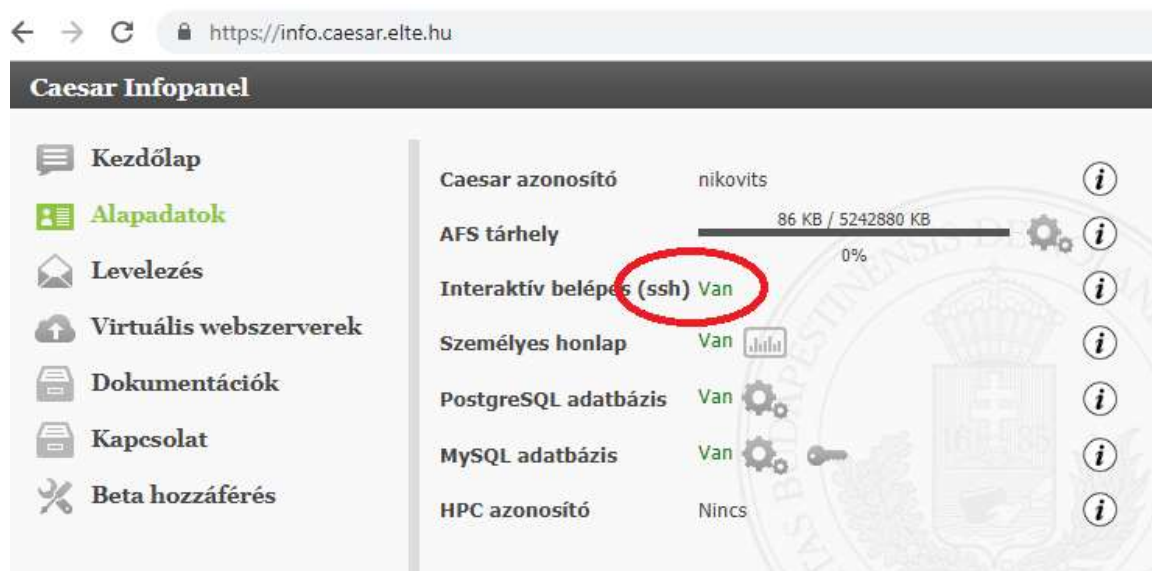

Save the session and **login to caesar.elte.hu** with the above settings.

2. Connect to the database using **SqlDeveloper** with the following settings:
(**ssh connection should be open** during the whole database connection time)

Important note.

Caesar email account is not enough to login with ssh. Check whether ssh is available to you at <https://info.caesar.elte.hu>

The green „Van” means, you have permission to login to caesar.elte.hu. If you see there something else, contact your caesar administrator.
